

What is claimed is:

1. A method of providing user-chosen telephone services on a digital cable TV set-top box, comprising the steps of:
  - scanning for a downstream channel by a set-top box;
  - synchronizing with the downstream channel by the set-top box;
  - synchronizing with the service provider's telephone network by the set-top box;
  - downloading programs and data to the set-top box by the service provider;
  - executing the programs downloaded to the set-top box by the user to select a telephone service;
  - entering data selections made by the user in the set-top box;
  - storing the user selections in the set-top box; and
  - using the user selections by the set-top box to provide a telephone service to the user.
2. The method as in claim 1, wherein the step of storing the user selections in the set-top box comprises the step of:
  - storing the user selections in a storage medium removably coupled to the set-top box.
3. The method as in claim 2, further comprising the steps of:
  - removing the storage medium from the set-top box; and
  - inserting the removed storage medium in a second set-top box, thereby achieving a functionality in the second set-top box similar in nature to the first set-top box.
4. Computer-executable program code stored on a computer-readable medium, said program code configured to provide consumer-chosen telephone services on a digital cable TV set-top box, comprising:
  - code to scan for a downstream channel;
  - code to synchronize with the downstream channel;
  - code to synchronize with a service provider's telephone network;
  - code to download programs and data to the set-top box;

code to enable a user to select a telephone service;  
code to enter user's selections in the set-top box;  
code to store the user's selections in the set-top box; and  
code to use the user's selections to provide a telephone service to the user.

5

5. A method of providing user-chosen telephone services on a digital cable  
TV

set-top box comprising the steps of:

receiving from a user a subscription to telephone services offered by a service

10 provider; and

receiving from the user a request for telephone services.
